

Aim: Students will identify what different animals eat by matching animals to their respective foods.

Time: 45-60 minutes

Materials:

- Scissors, glue sticks
- Toy animals (lion, giraffe, fish, bear) or animal pictures
- Real or picture-based food items (meat, leaves, small fish, honey)
- Crayons or markers for colouring
- Small baskets or containers for sorting activities

Tip: Encourage Observation and Critical Thinking: Rather than telling students directly which food goes with each animal, ask questions to guide them. For example, "Do you think a lion would like honey or meat?" This encourages them to think critically and supports language development.

Engage:

- Start by introducing each animal in the book page and asking students, "What do you think a lion eats?" Encourage them to share ideas about each animal's diet (lion, giraffe, fish, and bear). To make it engaging, show a toy or picture of each animal and a selection of possible foods.

Explore & Practice:

With the book

- Using the book page, have students cut out the pictures of food on the right and match them to the correct animal by gluing them in the boxes.

Sorting Food into Baskets

- Set up small baskets or containers labeled with each animal. Place the food items (meat, leaves, fish, honey) around the classroom and ask children to place each food item in the correct animal's basket.

Closing:

Animal Food Song and Movement

- End the lesson with a fun song about animals and what they eat (e.g., "The lion eats meat, the giraffe eats leaves..."). Have the children act out the animals as they sing.
